Your Dell™ Projector

Your projector comes with all the items shown below. Ensure that you have all the items, and contact Dell if anything is missing. For more information see, "Contacting Dell".

Package Contents

Power cable (1.8m)

S-Video cable (2.0m)

USB cable (1.8m)

Composite cable (1.8m)

VGA to component cable (1.8m)

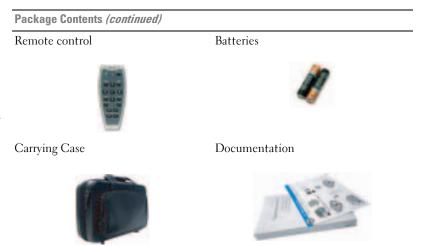

RCA to audio cable (1.8m)

Mini pin to Mini pin cable (1.8m)

Using Your Projector

Turning Your Projector On

NOTE: Turn on the projector before you turn on the source (computer, notebook, DVD, etc.). The Power button light blinks green until pressed.

- **1** Remove the lens cap.
- **2** Connect the power cord and appropriate cables. For information about connecting the projector, see "Connecting Your Projector" on page 7.
- **3** Press the Power button (see "About Your Projector" on page 6 to locate the Power button). The Dell logo displays for 30 seconds.
- **4** Turn on your source (computer, DVD player, etc.). The projector automatically detects your source.

If the "Searching..." message appears on the screen, ensure that the appropriate cables are securely connected.

If you have multiple sources connected to the projector, press the **Source** button on the remote control or control panel to select the desired source.

Turning Your Projector Off

NOTICE: Unplug the projector after properly shutting down as explained in the following procedure.

- **1** Press the Power button twice. The cooling fan continues to operate for 90 seconds.
- **2** Disconnect the power cord from the electrical outlet and the projector.

NOTE: If you press the Power button while the projector is running, the following message appears:

" Press Power button to Turn Off Projector. Projector must cool down for 90 seconds before unplugging or restarting. "The message disappears in 5 seconds or you can press any button on the control panel to erase it.

Adjusting the Projected Image

Raising the Projector Height

- **1** Press the elevator button.
- **2** Raise the projector to the desired display angle, and then release the button to lock the elevator foot into position.
- **3** Use the tilt adjustment wheel to fine-tune the display angle; if necessary, press the side elevator buttons to raise the rear side of the projector to the desired display angle.

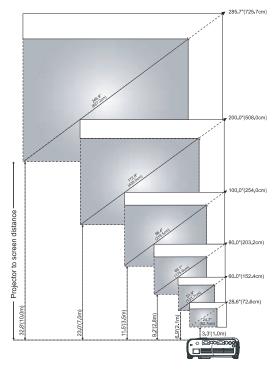

Lowering the Projector Height

- **1** Press the elevator button.
- **2** Lower the projector, and then release the button to lock the elevator foot into position.

| 1 | Elevator button |
|---|-----------------------|
| 2 | Elevator foot |
| 3 | Tilt adjustment wheel |

Adjusting Projection Image Size

| *This graph is for user reference only. | | | | | | | |

Adjusting the Projector Zoom and Focus

A CAUTION: To avoid damaging the projector, ensure that the zoom lens and elevator foot are fully retracted before moving the projector or placing the projector in its carrying case.

- 1 Rotate the zoom tab to zoom in and out.
- **2** Rotate the focus ring until the image is clear. The projector focuses at distances from 3.3ft to 32.8ft (1m to 10m).

| 1 | Zoom tab |
|---|------------|
| 2 | Focus ring |

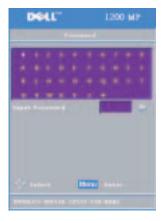

Password Security

Protect your projector and restrict access to it with Password Security feature. This security utility enables you to impose a variety of access restrictions to protect your privacy and stop others from tampering with your projector. This means that the projector cannot be used if it is taken without authorization, and thus serves as a theft-prevention feature.

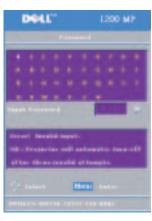

When Password Protect is enabled (On), a Password Protect screen requesting you to enter a password will be displayed when the power plug is inserted into the electrical outlet and the power for the projector is first turned on.

By default, this function is disabled. You can enable this feature using the Password menu. Refer to section in this manual titled "Management Menu-Password" for further details. This password security feature will be activated on the next time you turn on the projector.

If you enable this feature, you will be asked to enter the projector's password after you turn on the projector:

- 1 1st time password input request:
 - a Use the directional keys to enter the password.
 - **b** Press the Menu button to confirm.
 - **c** If the password verification is successful, you may resume with accessing the projector's functions and its utilities.

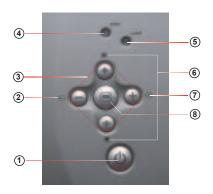

2 If you have entered incorrect password, you will be given another 2 chances. After the three invalid attempts, the projector will automatically turn off.

NOTE: If you forget your password, contact Dell. For more information see, "Contacting Dell".

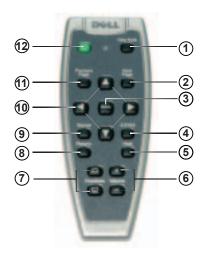

Using the Control Panel

| 1 | Power | Turn the projector on and off. For more information, see "Turning Your Projector On" on page 11 and "Turning Your Projector Off" on page 11. | | |
|---|--------------------------|---|--|--|
| 2 | Source | Press to toggle through Analog RGB, Composite, Component-i, S-video, and Analog YPbPr sources when multiple sources are connected to the projector. | | |
| 3 | Four Directional Keys | The four directional keys • • • can be used to toggle through the tabs in the OSD. | | |
| 4 | TEMP warning light | A solid orange TEMP light indicates that the projector has overheated. The display automatically shuts down. Turn the display on again after the projector cools down. If the problem persists, contact Dell. A blinking orange Temp light indicates that a projector fan has failed and the projector automatically shuts down. If this problem persists, contact Dell. | | |
| 5 | LAMP warning light | If the Lamp light is solid orange, replace the lamp. | | |
| 6 | Keystone adjustment | If your image is not perpendicular to the screen, then it does not appear square. Press to adjust image distortion caused by tilting the projector. (±16 degrees) | | |
| 7 | Resync | Press to synchronize the projector to the input source. Resync does not operate if the on-screen display (OSD) is displayed. | | |

| 8 Menu | Press to activate the OSD. Use the directional keys and |
|--------|---|
| | the Menu button to navigate through the OSD. |

Using the Remote Control

| 1 | Video Mode | Press once to show the current display mode. Press the button again to toggle between PC, Movie, sRGB, or User mode. |
|---|-------------|--|
| 2 | Next Page | Press to move to the next page. |
| | | NOTE: The USB cable must be connected to use this function. |
| 3 | Menu | Press to activate the on-screen display (OSD). Use the directional keys and the Menu button to navigate through the OSD. |
| 4 | 4:3/16:9 | Press to switch the aspect ratio: 1:1, 16:9, 4:3. |
| 5 | Hide button | Press to hide the image, press again to display the image. |
| 6 | Volume +/- | Press to increase (+) or decrease (-) the volume or toggle through the OSD tabs. |
| | | |

| 7 | Keystone adjustment | If your image is not perpendicular to the screen, then it does not appear square. Press to adjust image distortion caused by tilting the projector $(\pm 16 \text{ degrees})$. | |
|----|---------------------|---|--|
| 8 | Resync | Press to synchronize the projector to the input source. Resync does not operate if the OSD is displayed. | |
| 9 | Source | Press to toggle through Analog RGB, Composite, Component-i, S-video, and Analog YPbPr sources when multiple sources are connected to the projector. | |
| 10 | Directional keys | Use the ▲ or ▼ button to select OSD items, use the ◀ or ▶ button to make adjustments. | |
| 11 | Previous Page | Press to go to the previous page. | |
| | | NOTE: The USB cable must be connected to use this function. | |
| 12 | Power | Turn the projector on and off. For more information, see "Turning Your Projector On" on page 11 and "Turning Your Projector Off" on page 11. | |

Using the On-Screen Display

The projector has a multi-language On-Screen Display (OSD) that can be displayed with or without an input source present.

In the Main Menu, press the → or → button on the control panel or the ▲ or ▼ button on the remote control navigate through the tabs. Press the → button on the control panel or the Menu button on the remote control to select a submenu.

In the submenus, press the ● or ● button on the control panel or the ▲ or ▼ button on the remote control to make a selection. When an item is selected, the color changes to dark gray. Use the ● or ● button on the control panel or the ◀ or ▶ button on the remote control make adjustments to a setting.

To exit the OSD, go to the Exit tab and press the button on the control panel or the Menu button on the remote control

Main Menu

All Images Menu

BRIGHTNESS—Use the (a) or (b) button on the control panel or the ◀ or ▶ button on the remote control to adjust the brightness of the image.

CONTRAST—Use the (a) or (b) button on the control panel or the ◀ or ▶ button on the remote control to adjust the degree of difference between the brightest and darkest parts of the picture. Adjusting the contrast changes the amount of black and white in the image.

COLOR TEMP—Adjust the color temperature. The screen appears more blue at higher temperatures. The screen appears more red at lower temperatures.

User mode activates the values in the color setting menu.

COLOR SETTING—Manually adjust red, green, and blue color.

KEYSTONE—Adjust the image distortion caused by tilting the projector (± 16 degrees).

AUTO KEYSTONE—Select Yes to enable the auto correction for vertical image distortion caused by tilting the projector. To manually adjust the keystone, press the less button on the control panel or the Menu button on the remote control.

SEMI-AUTO KEYSTONE—Press the left button on the control panel or the Menu button on the remote control to activate the Semi-Auto Keystone correction for image distortion.

ASPECT RATIO—Select an aspect ratio to adjust how the image appears.

- 1:1 The input source displays without scaling.
 - Use 1:1 aspect ratio if you are using one of the following:
 - VGA cable and the computer has a resolution less than XGA (1024 x 768)
 - Component cable (576p/480i/480p)
 - S-Video cable
 - Composite cable
- 16:9 The input source scales to fit the width of the screen.
- 4:3 The input source scales to fit the screen.

Use 16:9 or 4:3 if you are using one of the following:

- Computer resolution greater than XGA
- Component cable (1080i or 720p)

VIDEO MODE—Select a mode to optimize the display image based on how the projector is being used: Movie, PC, sRGB (provides more accurate color representation), and User (set your preferred settings). If you adjust the settings for White Intensity or Degamma, the projector automatically switches to User.

WHITE INTENSITY—Select 0 to maximize the color reproduction and 10 to maximize the brightness.

DEGAMMA—Adjust between 1 and 6 to change the color performance of the display. The default setting is 0.

Computer Image Menu

NOTE: This menu is only available when a computer is connected.

FREQUENCY—Change the display data clock frequency to match the frequency of your computer graphics card. If you see a vertical flickering bar, use Frequency control to minimize the bars. This is a coarse adjustment.

TRACKING—Synchronize the phase of the display signal with the graphics card. If you experience an unstable or flickering image, use Tracking to correct it. This is a fine adjustment.

NOTE: Adjust Frequency first and then Tracking.

HOR. POSITION—Press the button on the control panel or the button on the remote control to adjust the horizontal position of the image to the left and press the ⊕ button on the control panel or the ▶ button on the remote control to adjust the horizontal position of the image to the right.

VER. POSITION—Press the (□) button on the control panel or the ◀ button on the remote control to adjust the vertical position of the image downward and press the **(★)** button on the control panel or the **>** button on the remote control to adjust the vertical position of the image upward.

Video Image Menu

NOTE: This menu is only available when an S-video or composite video source is connected.

SATURATION—Press the button on the control panel or the ◀ button on the remote control to decrease the amount of color in the image and press the (+) button the control panel or the button on the remote control to increase the amount of color in the image.

SHARPNESS—Press the button on the control panel or the **◄** button on the remote control to decrease the sharpness and press the (+) button on

the control panel or the button on the remote control to increase the sharpness.

TINT—Press the (■) button on the control panel or the **** button on the remote control to increase the amount of green in the image and press the 🕦 button on the control panel or the button on the remote control to increase the amount of red in the image.

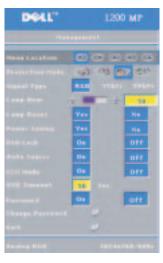

Audio Menu

VOLUME—Press the button on the control panel or the - button on the remote control to decrease the volume and press the (**) button on the control panel or the + button on the remote control to increase the volume

MUTE—Allows to mute the volume.

Management Menu

MENU LOCATION—Select the location of the OSD on the screen.

PROJECTION MODE—Select how the image appears:

- **Image** Front Projection-Desktop (the default).
- Rear Projection-Desktop The projector reverses the image so you can project from behind a translucent screen.
- Front Projection-Ceiling Mount The projector turns the image upside down for ceiling-mounted projection.
- Rear Projection-Ceiling Mount The projector reverses and turns the image upside down. You can project from behind a translucent screen with a ceiling-mounted projection.

Signal Type—Manually select the signal type (RGB, YCbCr, or YPbPr).

LAMP HOUR—Displays the operating hours since the last timer reset.

LAMP RESET—After you install a new lamp, select **Yes** to reset the lamp timer.

POWER SAVING—Select Yes to set the power saving delay period. The delay period is the amount of time you want the projector to wait without signal input. After that set time, the projector enters power saving mode and turns off the lamp. The projector turns back on when it detects an input signal or you press the **Power** button. After two hours, the projector turns off and you need to press the **Power** button to turn the projector on.

OSD Lock—Select On to enable the OSD Lock for hiding the OSD menu. To display OSD menu, press the button on the control panel or the Menu button on the remote control for 15 seconds.

AUTO SOURCE—Select On (the default) to auto detect the available input signals. When the projector is on and you press **Source**, it automatically finds the next available input signal. Select Off to lock the current input signal. When Off is selected and you press **Source**, you select which input signal you want to use.

Eco Mode—Select **On** to use the projector at a lower power level (150 Watts), which may provide longer lamp life, quieter operating, and dimmer luminance output on the screen. Select **Off** to operate at normal power level (200 Watts).

OSD TIMEOUT —Use this function to set the duration OSD menu stay active (at idle state).

Password—Select On to enable you to impose a variety of access restrictions to protect your privacy and stop others from tampering with your projector.

- a Press the ◀ button to select On.
 - If this setting is set to Off, the Change Password feature will be disabled.
- **b** Set your password with the directional keys and press the Menu button to confirm.

NOTE: To disable the Password setting, user will be asked to enter the correct password. If the password verification is successful. only then the Password can be set to Off.

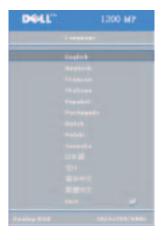

CHANGE PASSWORD—Use this function to modify the password to your preference.

- **a** Enter your current password with the directional keys.
- **b** Set your new password.
- **c** Verify again your new password.
- **d** Press the Menu button to confirm.

NOTE: The current Password can only be reset if the Password setting is set to Off.

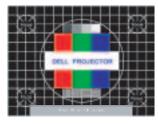

Language Menu

Press the \odot or \odot button on the control panel or the \triangle or \blacktriangledown button on the remote control to select the preferred language for the OSD.

Press the
on the control panel or the Menu button on the remote control to confirm the language selection.

Test Pattern Menu

Press the button on the control panel or the Menu button on the remote control to display the test pattern chart. Use this function to adjust the focus of the projected screen. Use the or button on the control panel or the to button on the remote control to exit from this mode.

Factory Reset Menu

Select **Yes** to reset the projector to its factory default settings. Reset items include both computer image and video image settings.

Troubleshooting Your Projector

If you experience problems with your projector, see the following troubleshooting tips. If the problem persists, contact Dell. For more information see, "Contacting Dell".

Problem

No image appears on the screen

Possible Solution

- Ensure that the lens cap is removed and the projector is turned on.
- Ensure that the external graphics port is enabled. If you are using a Dell portable computer, press **E E**. For other computers, see respective documentation.

NOTE: Allow the projector some time to search for the source.

- Ensure that all the cables are securely connected. See "Connecting Your Projector" on page 7.
- Ensure that the pins of the connectors are not bent or broken.
- Ensure that the lamp is securely installed (see "Changing the Lamp" on page 28).

| Problem <i>(continued)</i> | Possible Solution (continued) | | | |
|--|---|--|--|--|
| Partial, scrolling, or incorrectly displayed image | 1 Press the Resync button on the remote control or the control panel. | | | |
| FR CRIT/LCO | 2 If you are using a Dell portable computer, set the resolution of the computer to XGA (1024 x 768): a Right-click the unused portion of your Windows desktop, click Properties and then select Settings tab. b Verify the setting is 1024 x 768 pixels for the external monitor port. c Press | | | |
| | If you experience difficulty in changing resolutions or your monitor freezes, restart all the equipment and the projector. | | | |
| | If you are not using a Dell portable, see related documentation. | | | |
| The screen does not display your presentation | If you are using a Dell portable computer, press | | | |
| Image is unstable or flickering | Adjust the tracking in the OSD Computer Image tab. | | | |
| Image has vertical flickering bar | Adjust the frequency in the OSD Computer Image tab. | | | |
| Image color is not correct | If your graphic card output signal appears green, and you would like to display VGA at 60Hz signal, please go into the OSD select Management, select Signal Type, and then select RGB. | | | |
| Image is out of focus | 1 Adjust the focus ring on the projector lens. | | | |
| | 2 Ensure that the projection screen is within the required distance from the projector (3.3ft [1m] to 32.8ft [10m]). | | | |

| Problem <i>(continued)</i> | Possible Solution <i>(continued)</i> |
|--|--|
| The image is stretched when displaying a 16:9 DVD | The projector automatically detects 16:9 DVD and adjusts the aspect ratio to full screen with a 4:3 (letter-box) default setting. If the image is still stretched, adjust the aspect ratio as follows: |
| | • If you are playing a 16:9 DVD, select 4:3 aspect ratio type on your DVD player (if capable). |
| | • If you cannot select 4:3 aspect ratio type on your DVD player, select 4:3 aspect ratio in the All Images menu in the OSD. |
| Image is reversed | Select Management from the OSD and adjust the projection mode. |
| Lamp is burned out or makes a popping sound | When the lamp reaches its end of life, it may burn out and may make a loud popping sound. If this occurs, the projector does not turn back on, and displays Lamp Defective in the LCD display until the lamp is replaced. To replace the lamp, see "Changing the Lamp" on page 28. |
| The remote control is not operating smoothly or in very limited range | The battery may be low. If so, replace it with 2 new AAA batteries. |
| OSD display window does not appear on the screen after pressing the Menu button on the remote control or on the control panel | Try the following procedures: 1 Press the Menu button on the remote control or on the control panel for 15 seconds until OSD pops up. 2 Select Management from the OSD. 3 Set OSD Lock to "Off". |

LAMP & TEMP indicator information

| LAMP light is solid orange | If the Lamp light is solid orange, replace the lamp. |
|-------------------------------|--|
| TEMP light is solid orange | The projector has overheated. The display automatically shuts down. Turn the display on again after the projector cools down. If the problem persists, contact Dell. |
| TEMP light is blinking orange | A projector fan has failed and the projector automatically shuts down. If this problem persists, contact Dell. |

Changing the Lamp

Replace the lamp when the message "Lamp is approaching the end of its useful life in full power operation. Replacement suggested!" appears on the screen. If this problem persists after replacing the lamp, contact Dell. For more information see, "Contacting Dell".

CAUTION: The lamp becomes very hot when in use. Do not attempt to replace the lamp until the projector has been allowed to cool down for at least 30 minutes.

- **1** Turn off the projector and disconnect the power cord.
- **2** Let the projector cool for at least 30 minutes.
- **3** Loosen the 2 screws that secure the lamp cover, and remove the cover.

CAUTION: If the lamp has shattered, be careful as the broken pieces are sharp and can cause injury. Remove all broken pieces from the projector and dispose or recycle according to state, local or federal law. Go to www.dell.com/hg for addtitional information.

4 Loosen the 2 screws that secure the lamp.

CAUTION: Do not touch the bulb or the lamp glass at any time. Projector lamps are very fragile and may shatter if touched.

5 Pull up the lamp by its metal handle.

NOTE: Dell may require that lamps replaced under warranty be returned to Dell.

- **6** Replace with the new lamp.
- 7 Tighten the 2 screws that secure the lamp.
- **8** Place the lamp cover and tighten the 2 screws.
- 9 Reset the lamp usage time by selecting Yes for Lamp Reset icon in the OSD Management tab. (Refer to Management Menu in Owner's Manual)

CAUTION: (9) LAMP(S) INSIDE THIS PRODUCT CONTAIN MERCURY AND MUST BE RECYCLED OR DISPOSED OF

ACCORDING TO LOCAL, STATE OR FEDERAL

LAWS. FOR MORE INFORMATION, GO TO WWW.DELL.COM/HG OR CONTACT THE ELECTRONIC INDUSTRIES ALLIANCE AT WWW.EIAE.ORG. FOR LAMP SPECIFIC DISPOSAL INFORMATION CHECK WWW.LAMPRECYCLE.ORG.

Contacting Dell

To contact Dell electronically, you can access the following websites:

- www.dell.com
- support.dell.com (support)

For specific web addresses for your country, find the appropriate country section in the table below.

NOTE: Toll-free numbers are for use within the country for which they are listed.

NOTE: In certain countries, support specific to Dell XPS™ portable computers is available at a separate telephone number listed for participating countries. If you do not see a telephone number listed that is specific for XPS portable computers, you may contact Dell through the support number listed and your call will be routed appropriately.

When you need to contact Dell, use the electronic addresses, telephone numbers, and codes provided in the following table. If you need assistance in determining which codes to use, contact a local or an international operator.

| Country (City) International Access Code Country Code City Code | Department Name or Service Area, Website and E-Mail Address | Area Codes, Local Numbers, and Toll-Free Numbers |

Glossary

ANSI Lumens—A standard for measuring light output, used for comparing projectors.

Aspect Ratio—The most popular aspect ratio is 4:3 (4 by 3). Early television and computer video formats are in a 4:3 aspect ratio, which means that the width of the image is 4/3 times the height.

Backlit (Backlight)—Refers to a remote control, or a projector control panel, that has buttons and controls that are illuminated.

Bandwidth—The number of cycles per second (Hertz) expressing the difference between the lower and upper limiting frequencies of a frequency band; also, the width of a band of frequencies.

Brightness—The amount of light emitting from a display or projection display or projection device. The brightness of projector is measured by ANSI lumens.

Color Temperature—A method of measuring the whiteness of a light source. Metal halide lamps have a higher temperature compared to halogen or incandescent lights.

Component Video—A method of delivering quality video in a format that contains all the components of the original image. These components are referred to as luma and chroma and are defined as Y'Pb'Pr' for analog component and Y'Cb'Cr' for digital component. Component video is available on DVD players and projectors.

Composite Video—The combined picture signal, including vertical and horizontal blanking and synchronizing signals.

Compression—A function that deletes resolution lines from the image to fit in the display area.

Compressed SVGA—To project an 800x600 image to a VGA projector, the original 800x600 signal must be compressed down. The data displays all the information with only two thirds of the pixels (307,000 vs 480,000). The resulting image is SVGA page size but sacrifices some of the image quality. If you are using an SVGA computers, connecting VGA to a VGA projector provide better results.

Compressed SXGA—Found on XGA projectors, compressed SXGA handling allows these projectors to handle up to 1280x1024 SXGA resolution.

Compressed XGA—Found on SVGA projectors, compressed XGA handling allows these projectors to handle 1024x768 XGA resolution.

Contrast Ratio—Range of light and dark values in a picture, or the ratio between their maximum and minimum values. There are two methods used by the projection industry to measure the ratio:

- **1** *Full On/Off* measures the ratio of the light output of an all white image (full on) and the light output of an all black (full off) image.
- **2** ANSI measures a pattern of 16 alternating black and white rectangles. The average light output from the white rectangles is divided by the average light output of the black rectangles to determine the ANSI contrast ratio.

Full On/Off contrast is always a larger number than ANSI contrast for the same projector.

dB—decibel—A unit used to express relative difference in power or intensity, usually between two acoustic or electric signals, equal to ten times the common logarithm of the ratio of the two levels.

Diagonal Screen—A method of measuring the size of a screen or a projected image. It measures from one corner to the opposite corner. A 9ft high, 12ft wide, screen has a diagonal of 15ft. This document assumes that the diagonal dimensions are for the traditional 4:3 ratio of a computer image as per the example above.

DLP—Digital Light Processing — Reflective display technology developed by Texas Instruments, using small manipulated mirrors. Light passes through a color filter is sent to the DLP mirrors which arrange the RGB colors into a picture projected onto screen, also known as DMD.

DMD—DMD — Digital Micro-mirror Device — Each DMD consists of thousands of tilting, microscopic aluminum alloy mirrors mounted on a hidden yoke.

DVI—Digital Visual Interface — Defines the digital interface between digital devices such as projectors and personal computers. For devices that support DVI, a digital to digital connection can be made that eliminates the conversion to analog and thereby delivers an unblemished image.

Focal Length—The distance from the surface of a lens to its focal point.

Frequency—It is the rate of repetition in cycles per seconds of electrical signals. Measured in Hz.

Hz—Frequency of an alternating signal. See Frequency.

Keystone Correction—Device that will correct an image of the distortion(usually a wide-top narrow-bottom effect) of a projected image caused by improper projector to screen angle.

Laser Pointer—A small pen or cigar-sized pointer, that contains a small battery powered laser, which can project a small, red (typically), high intensity beam of light that is immediately very visible on the screen.

Maximum Distance—The distance from a screen the projector can be to cast an image that is useable (bright enough) in a fully darkened room.

Maximum Image Size—The largest image a projector can throw in a darkened room. This is usually limited by focal range of the optics.

Metal Halide Lamp—The type of lamp used in many medium and all high end portable projectors. These lamps typically have a "half-life" of 1000-2000 hours. That is they slowly lose intensity (brightness) as they are used, and at the "half-life" point, they are half as bright as when new. These lamps output a very "hot" temperature light, similar to mercury vapor lamps used in street lights. Their whites are extremely white (with a slight bluish cast) and make a halogen lamp's whites look very yellowish by comparison.

Minimum Distance—The closest position that a projector can focus an image onto a screen.

NTSC—The United States broadcast standard for video and broadcasting.

PAL—A European and international broadcast standard for video and broadcasting. Higher resolution than NTSC.

Power Zoom—A zoom lens with the zoom in and out controlled by a motor, usually adjusted from the projector's control panel and also the remote control.

Reverse Image—Feature that allows you to flip the image horizontally. When used in a normal forward projection environment text, graphics, etc, are backwards. Reverse image is used for rear projection.

RGB—Red, Green, Blue — typically used to describe a monitor that requires separate signals for each of the three colors.

S-Video—A video transmission standard that uses a 4 pin mini-DIN connector to send video information on two signal wires called luminance (brightness, Y) and chrominance (color, C). S-Video is also referred to as Y/C.

SECAM—A French and international broadcast standard for video and broadcasting. Higher resolution than NTSC.

SVGA—Super Video Graphics Array — 800 x 600 pixels count.

SXGA—Super Ultra Graphics Array, — 1280 x 1024 pixels count.

UXGA—Ultra Extended Graphics Array — 1600 x 1200 pixels count.

VGA—Video Graphics Array — 640 x 480 pixels count.

XGA—Extra Video Graphics Array — 1024 x 768 pixels count.

Zoom Lens—Lens with a variable focal length that allows operator to move the view in or out making the image smaller or larger.

Zoom Lens Ratio—Is the ratio between the smallest and largest image a lens can projector from a fixed distance. For example, a 1.4:1 zoom lens ratio means that a 10-foot image without zoom would be a 14-foot image with full zoom.
